

Cloud Standards

Opening the Clouds

Victor Harrison

Board of Directors, Object Management Group
Director, Distinguished Engineering Group, CSC

10/27/2009

Worlds Largest Software Specification Consortium

- Founded in 1989.
- Members are from commercial companies, software and hardware vendors, government agencies (US and other), and Academia
- 600 enterprises and 35,000 members
- Member-driven specification development
 - Members define the problems to be solved
 - Members do the work to develop the specifications
 - Members implement the specifications
- Specifications become
 - Tool enabled (e.g., UML, BPMN, SysML and all UML Profiles)
 - Basis for Services (e.g., Joint Records Management Service)
 - Profiles for Solution Development/Delivery (e.g., SOA)

1989  2009
OMG TWENTIETH ANNIVERSARY

We are a global leader in providing technology enabled business solutions and services.

- Founded in 1959
- Global, end-to-end capabilities in consulting, IT and business process outsourcing, and systems integration
- Providing services for government and commercial clients including a large number of defense industrial base (DIB) organizations
- \$16.74 billion for the 12 months ended April 3, 2009
- 92,000 employees in more than 90 countries worldwide
- Serving 15 industries on 6 continents
- World-class cyber security skills, technology and offerings

The Cloud Problem

Whose Definition?...Whose Approach?...What's Appropriate!

The collage features several logos and images:

- IBM Cloud Computing** (top right)
- SNIA** (top right)
- tmforum** (middle right)
- OGF** (middle right)
- DMTF** (middle left)
- CSA security alliance** (middle left)
- OASIS** (middle left)
- NIST National Institute of Standards and Technology Information Technology Laboratory** (bottom left)
- Computer Security Division Computer Security Resource Center** (bottom left)
- UNISYS** (bottom right)
- CLOUD COMPUTING INTEROPERABILITY FORUM** (bottom right)

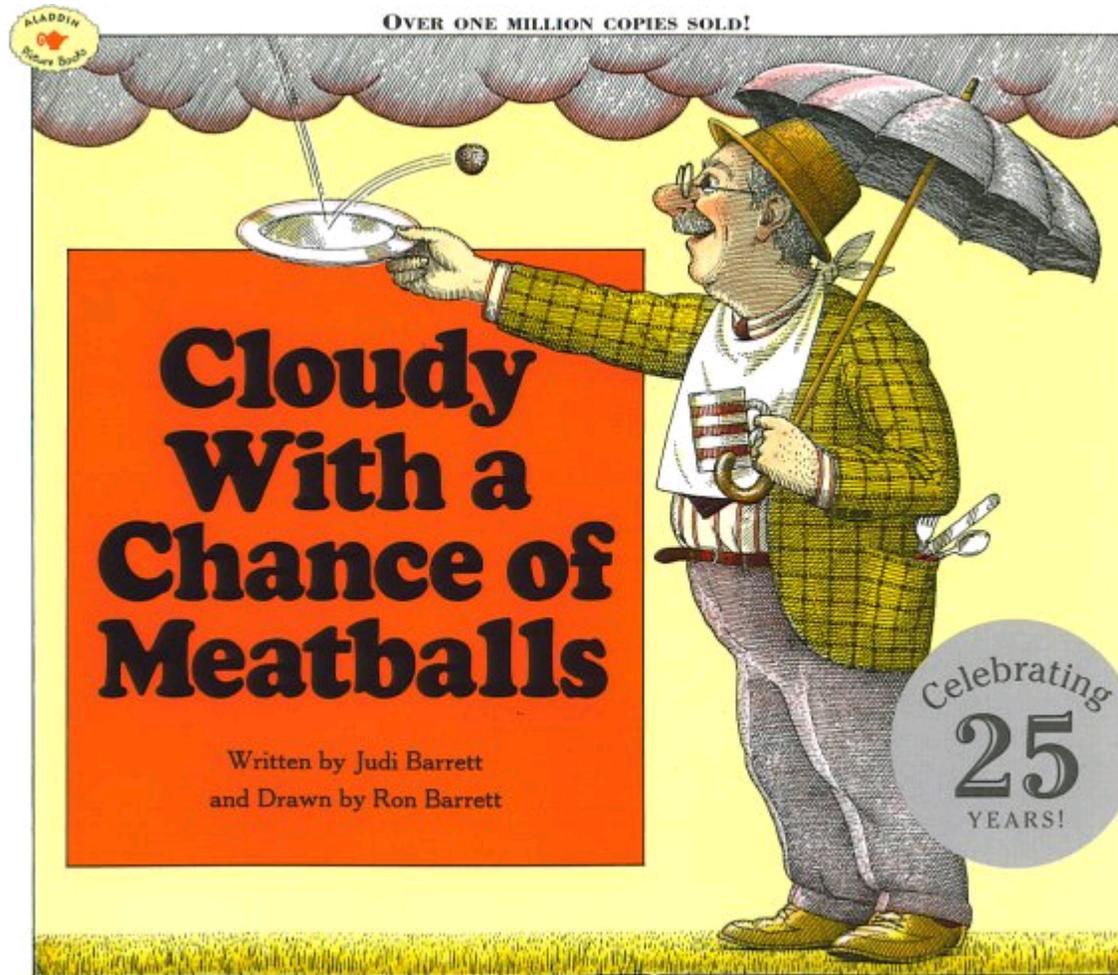

Other elements include a 'Cloud Computing Journal' cover, a 'Sun's Incubation Platform: Helping Startups Serve the Enterprise' presentation slide, and a 'UNISYS' advertisement with the text 'Navigate Your Way Through the Cloud Securely'.

Recent Quote: "...I'm not happy with any definition I have heard to date..."

Proposition: Reduce the “cloud decision” to a business decision between capital expense and operating expense

- Get standards in place, rapidly, and we win
 - Easy to build portable, interoperable services
 - Support a fast-growing market for services with standardized SLA's
 - Cybersecurity built in
 - Value proposition
- Address “full lifecycle” aspects of the Cloud concept-to-Delivery
- In the same way UML and soaML provides a standard for innovation so, too, must a Cloud standard.

A New Joint Resource

- *A new joint resource to find out what's going on in the industry, available from vendors and among end-users about cloud computing standards:*
 - What standards exist or are under development
 - What products implement those standards
 - Who has used those products
 - How well they have worked (success & failure stories)

Cloud Standards Collaboration

- The leading Standards Development Organizations (SDO's) are collaborating to coordinate and communicate standards for Cloud computing and storage; working group established this year
- Many SDO's are already collaborating, more are welcome
- Committed to development of a joint resource on cloud computing strategies, standards and implementations
- Different SDO's are bringing together different but complementary abilities: storage, execution models, deployment models, service level agreements, security, authentication, privacy

A Joint Venture between Standards Development Organizations

Leading Organizations

Open Cloud Consortium

Standardization Areas

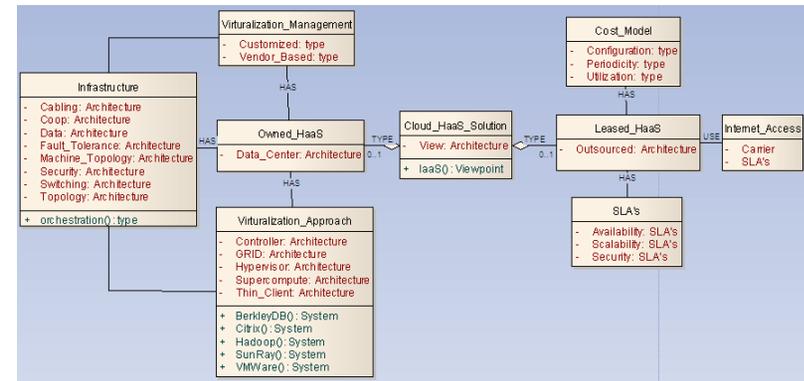

- Security (e.g. authentication, authorization)
- Interfaces to IaaS (e.g., compute, storage)
- PaaS & deployment model formats for Cloud applications
 - Resource descriptions (Required, Available)
 - Service & SLA models
- Management Frameworks
 - Governance and Policy Enforcement
 - Regulatory agreements (e.g. Data location and security)
 - SLA formats (e.g. Performance, Availability)
- Portable component descriptions (e.g. VM's)
- Data exchange formats (to and from Clouds)
- Cloud Taxonomies and Reference Models

We are starting to initialize an OMG Request for Proposal for Cloud Computing

- Variation of Capital versus Expense Models

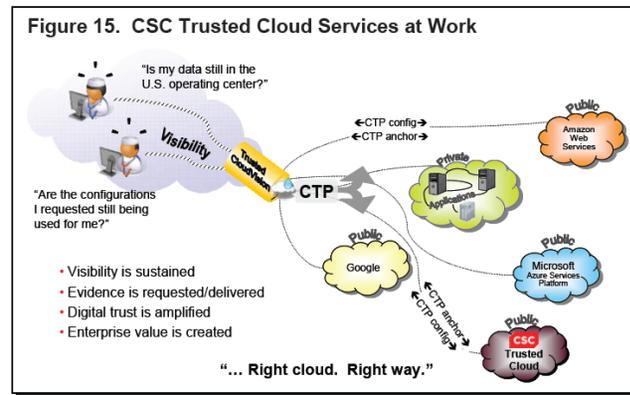

- Product Agnostic Description
 - UML profile for Cloud provides the same value as the soaML provides for SOA
 - Initial specification through provisioning
 - Multi-cloud vendor support

Snippet from OMG Draft RFP produced by CSC.

- Integrated, and trusted Cloud Cyber Security
 - Cloud-specific Threats and Attack patterns
 - Advanced Forensic specifications
 - Non-signature as well as signature-based
 - Inter-cloud trusted protocol(s)

From CSC's Digital Trust in the Cloud whitepaper.
